Send emails from your own website *address*

Couples see your own address in their inbox. Optional: your emails already work without it.

Your emails to couples and suppliers work from the start. They go out with your business name from an I Said Yes address, and replies come straight to you. Sending them from your own website address instead, so couples see that address in their inbox, is optional. It takes about 15 minutes at the company you pay for your website address, and your emails keep working the whole time.

Once you are signed in, go to Settings and, under Your emails, press See how your emails look. Type your website address and press Start, and three lines appear, each with a Type, a Name and a Value to copy across. They only add a new "send" part to your address, so your website and your normal email keep working exactly as they do now.

Rather we did it with you? On the same page, press Book a free call and we'll do it together.

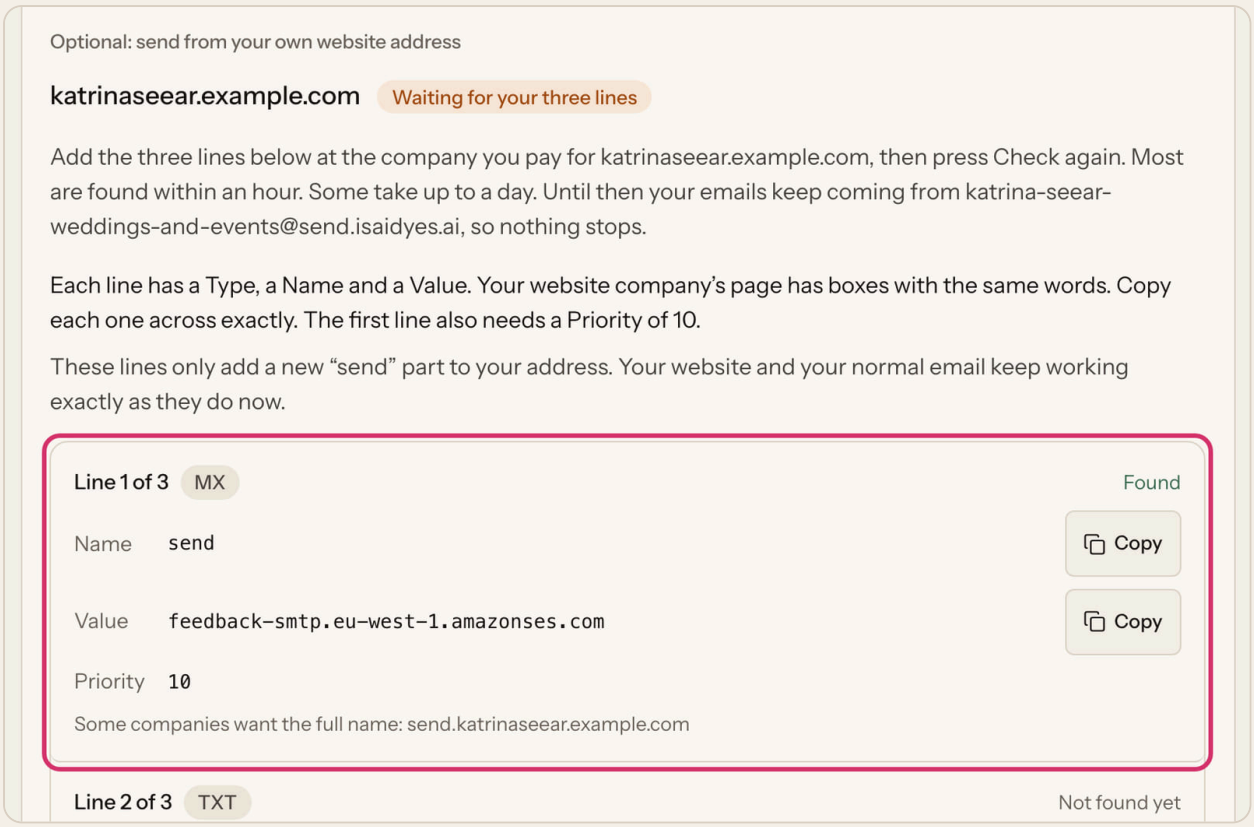

Follow the steps for what you use: **GoDaddy** · **IONOS** · **123 Reg** · **Squarespace or Google Domains** · **Cloudflare** · **your website company** · **someone else**.

GoDaddy

1. Go to **Settings** and, under **Your emails**, press **See how your emails look**. Type your website address under **Optional: send from your own website address** and press **Start**. Three lines appear.

2. In a new tab, sign in to GoDaddy and go to **My Products**, then **Domains**. Choose your website address, then **DNS**, sometimes shown as **Manage DNS**.

3. Press **Add New Record** and choose the **Type** shown on line 1. Copy its **Name** into **Name** and its **Value** into **Value**. Line 1 also needs **Priority** 10. Leave **TTL** as it is and press **Save**.

4. Do the same for lines 2 and 3.

5. Back in I Said Yes, press **Check again**. Most lines are found within an hour and some take up to a day. Your emails keep going out as normal until then.

IONOS

1. Go to **Settings** and, under **Your emails**, press **See how your emails look**. Type your website address under **Optional: send from your own website address** and press **Start**. Three lines appear.

2. In a new tab, sign in to IONOS and open **Domains & SSL**. Next to your website address, open the actions menu and choose **DNS**.

3. Press **Add record** and choose the **Type** shown on line 1. Copy its **Name** into **Host name** and its **Value** into **Points to**. Line 1 also needs **Priority** 10. Press **Save**.

4. Do the same for lines 2 and 3. For those two the box for the **Value** is called **Value**.

5. Back in I Said Yes, press **Check again**. Most lines are found within an hour and some take up to a day. Your emails keep going out as normal until then.

123 Reg

1. Go to **Settings** and, under **Your emails**, press **See how your emails look**. Type your website address under **Optional: send from your own website address** and press **Start**. Three lines appear.
2. In a new tab, sign in to 123 Reg and open the control panel for your website address. Choose **Manage DNS**, then the **Advanced DNS** tab.
3. In a new row, copy line 1's **Name** into **DNS Entry** and choose its **Type**. Copy its **Value** into **Destination/Target**, give it **Priority** 10 and press **Add**.
4. Do the same for lines 2 and 3.
5. Back in I Said Yes, press **Check again**. Most lines are found within an hour and some take up to a day. Your emails keep going out as normal until then.

Squarespace or Google Domains

1. Go to **Settings** and, under **Your emails**, press **See how your emails look**. Type your website address under **Optional: send from your own website address** and press **Start**. Three lines appear.
2. In a new tab, sign in to Squarespace and open **Domains**, then choose your website address. Open **DNS**, then **DNS Settings**. An address you had with Google Domains is here now too.
3. Under **Custom records**, press **Add record** and choose the **Type** shown on line 1. Copy its **Name** into **Host** and its **Value** into **Data**. Line 1 also needs **Priority** 10. Press **Save**.
4. Do the same for lines 2 and 3.
5. Back in I Said Yes, press **Check again**. Most lines are found within an hour and some take up to a day. Your emails keep going out as normal until then.

Cloudflare

1. Go to **Settings** and, under **Your emails**, press **See how your emails look**. Type your website address under **Optional: send from your own website address** and press **Start**. Three lines appear.
2. In a new tab, sign in to Cloudflare and choose your website address. Open **DNS**, then **Records**.
3. Press **Add record** and choose the **Type** shown on line 1. Copy its **Name** into **Name** and its **Value** into **Mail server**. Line 1 also needs **Priority** 10. Press **Save**.
4. Do the same for lines 2 and 3, pasting each **Value** into **Content**. If Cloudflare offers a **Proxy status**, set it to **DNS only**.
5. Back in I Said Yes, press **Check again**. Most lines are found within an hour and some take up to a day. Your emails keep going out as normal until then.

Wix, Namecheap or another company

1. Go to **Settings** and, under **Your emails**, press **See how your emails look**. Type your website address under **Optional: send from your own website address** and press **Start**. Three lines appear.
2. In a new tab, sign in to the company you pay for your website address and open that address. Look for its DNS records: they may be called DNS settings, DNS records or Advanced DNS.
3. Add a new record and choose the **Type** shown on line 1. Copy its **Name** and its **Value** into the boxes with the nearest names, such as Host and Content or Data. Line 1 also needs **Priority** 10. Save it.
4. Do the same for lines 2 and 3. If a box already shows your website address after it, copy only the **Name**, such as send, so the address is not there twice.
5. Back in I Said Yes, press **Check again**. Most lines are found within an hour and some take up to a day. Your emails keep going out as normal until then.

Someone else looks after it

1. Go to **Settings** and, under **Your emails**, press **See how your emails look**. Type your website address under **Optional: send from your own website address** and press **Start**. Three lines appear.
2. Copy your message from **Settings**: under **Your emails**, press **See how your emails look**, and it is under **Send these steps to someone**, with your three lines already in it.
3. Send it to whoever built your website, by email or WhatsApp. On **Your emails** you can also type their address and press **Email the steps**.
4. When they say it's done, go back to **Your emails** and press **Check again**.

Good to know

If the box for the name already shows your website address after it, copy just the Name, such as send: your website address typed twice is the most common reason a line is not found. Most lines are found within an hour and some take up to a day.

These steps were checked on 28 October 2026. Signed in to I Said Yes, the same guide is under **Set up guides**, with your own details ready to copy and ticks to keep your place. It is also at isaidyes.ai/help/sending-from-your-own-address.
